

Challenges:

Sustainability within the waste management industry is always a challenge; the most obvious issue currently is carbon emissions produced in the recycling process; for example, the mere collection of waste emits CO₂, as does the recycling/recovery process itself.

Go Green Ltd currently have two individuals who are responsible for Sustainability within the business, Laura Manson (EQMS & Compliance Manager) and Henry Boon (Sustainability Officer). They also have an Environmental and Sustainability Policy in place, which includes targets such as reducing their energy consumption in their offices by 5% year on year.

Impact:

- **Subject specific learning:** Go Green recently attended a Kier Highways supply chain event, during which they heard from the GLAA which broadened their knowledge on Modern Slavery in the industry.
- **“Closing the Gap”:** A number of staff have found the School very useful for closing a gap in their knowledge, without the need to have to attend external training courses.
- **Collaborative approach:** Jane has completed several individual assessments for her own learning; however, the corporate assessments were completed with the input of several members of staff. They found the process of working through the self-assessment very straightforward as it was explained well throughout the process.
- **Assessed learning:** Go Green Ltd have found it useful to complete the CPD accreditation quiz at the end of the School’s e-learning modules to ensure the learning contained within has been absorbed and taken on board.

Value gained:

- **Networking opportunities:** Go Green Ltd found that attending the Kier Highways supply chain event allowed them to meet their clients and other members who were involved with the School.
- **Focused learning:** Colleagues within the business found the self-assessment and Action Planning process very useful for highlighting the weaker areas of knowledge and understanding and allowing individuals to focus on specific subjects.
- **Development opportunities:** Go Green Ltd believe that the variety and amount of training tools offered by the School would allow members to continue their learning journey over a long period of time.
- **PR / comms opportunities:** Go Green Ltd have promoted our involvement via social media, such as LinkedIn, Instagram Twitter & Facebook, these are open to both customers & the supply chain. They have also promoted this within several of their customers’ businesses, who operate throughout the UK.
- **Enhanced reputation:** Go Green Ltd believe that furthering their involvement with the School will secure our position as a market leader fulfilling all customer criteria.

About

Go Green Ltd was founded in 2000 by professionals who consolidated their experience and knowledge from within the waste management industry after recognising the necessity for a facilitator to assist companies across the UK.

They provide a full waste management service for customers in all sectors across the UK, including Construction, Retail, Commercial, Utilities, Industrial and Infrastructure. Their client basis includes Kier Group, J Murphy and Willmott Dixon.

Member Case Study: **Go Green**

Go Green Ltd believes that introducing webinars on a regular basis on specific subjects related to the E-learning modules could be very useful for sharing knowledge, and to answer any queries users may have to the modules/further learning. They additionally believe that a chat forum for members may also be useful to discuss knowledge and share learning.
