

Environmental Sustainability:

Sustainability has always been a key consideration for the Directors of Terra Solutions Limited and they have held environmental management ISO 14001 since they were founded in 2007. They have been heavily involved in water and sewerage treatments works for many years and have always had environmental considerations at the forefront of operational planning and delivery. They employ innovative practices, introduced at design stage, for drain and sewer repairs – saving precious water reserves.

Social Sustainability / Impact:

In January 2020, as part of a strategic business review which identified a requirement for Terra Solutions to better align their core sustainability goals with those of their clients, they decided to focus more on the School and Terra Solution’s engagement, with Andrew Lambe (working on Terra Solutions JV for Thanet Sewer Repairs) leading this.

- **Tailored Sustainability Learning:** By undertaking the School’s “Sustainability Assessment”, Terra Solutions received their bespoke action plan and identified areas where positive improvements could be implemented; specifically, around social sustainability.
- **Understanding client requirements:** The environmental, social, and economic approach of the School allowed Terra Solutions to understand their client requirements over and above environmental sustainability.

Output / Value Gained:

Terra Solutions were able to use their engagement with the School and the self-assessment process to implement a range of activities which further evidence the value gained from membership of the School.

- **Social Media promotion:** One aspect of Terra Solutions’ response to their action plan was to highlight a range of social and environmental issues via social media that not only affect the construction industry but also have an impact on the immediate localities where the works were being undertaken localities
- **Improved Social Value knowledge:** During the early months of 2020, a campaign to improve Social Value and Legacy was adopted as a direct result of ideas formulated during the bronze and silver sustainability assessment stages of the School
- **Improved Social Value delivery:** Activities in the local community adjacent to projects were planned and delivered up to the March 2020 COVID Lockdown... at which point, more virtual support for global and local environmental campaigns was promoted via the use of the social media mentioned above, and also LinkedIn.
- **Improved reputation:** Terra Solutions can now demonstrate to their clients improved social value credentials as well as an improved sustainability profile

Social Media Posts:

Here are some examples of the posts which Terra Solutions have put out across their social media platforms to evidence their engagement with their action plan from the School:

What a good bunch we have working here in **#Thanet**, during the recent storms our site teams were more than happy to take a break from the tools to help those struggling with the high winds, especially on the seafront, to stay on their feet and get home safely.

JOIN **Terra Solutions Limited** in conjunction with **INTEGRA BD CONSULTANTS** for **EARTHDAY LockDown CleanUp**
WE have signed up to support **#earthday2020 #greatglobalcleanup** <https://lnkd.in/eRKMtuB> where friends, clients and suppliers on their daily exercise are encouraged to leave the **#environment** a better place by collecting rubbish. We will collate the total weight of the collected waste and report to the @EarthDayNetwork global team.. Keep social distancing please, most organised events have been postponed but we can still help as individuals..
