

In 2018, the School, our Partners and other key industry stakeholders developed Category Groups to run alongside our existing Leadership and Special Interest Groups.

These Groups are designed to develop and facilitate the implementation of the School's position on best practice sustainability within specific categories of our industry.

Current Category Groups:

- Plant
- Labour
- Waste

The School and its Partners recognise that, without a sustainable workforce or sources of labour, the industry cannot function, so they are collaborating to produce materials for the benefit of the whole supply chain.

This approach supports the School Vision of leadership to enable industry collaboration for the delivery of real priorities in the built environment.

Wates

With increasing scrutiny from clients and the government on the negative effect engines have on the air quality of our towns and cities, and with policy and penalties pushing organisations to address the issues through fleet and plant, the industry needs to look closely at how it operates plant, what it invests in, and how plant is disposed.

As a result of these challenges, Partners are collaborating to identify and provide the supply chain with information and guidance on plant standards and management.

Partners:

The work of this group is divided into three horizontal sub-groups, with representatives from each of the School's "markets" working in each sub-group to enable consensus and consistency of approach across the sector for each topic. The sub-groups: **Materials & Mapping, Procurement & Supply Chain Engagement, Measurement & Reporting.**
