

Challenges:

The key sustainability challenge for Abird Power Solutions is that they are one of the UK leading providers of temporary power.

The Solutions they provide are critical to support customers from powering major events to powering critical infrastructure projects. Providing generators from 20Kva to 1260Kva, mobilising a fleet of Hiab's and service vehicles which require diesel combustion engines to operate and run.

Abird have been at the forefront on innovation within the generator rental industry, helping customers to reduce their carbon foot print and use of fossil fuels on sites. Abird have been working to reduce its own impact on the environment and supporting customers to do the same.

Abird have providing customers ways to reduce fossil fuels with the use of Hybrid and eco solutions to coaching customers on how to reduce energy requirements.

Impact:

Abird power Solutions have been able to benchmark their knowledge by using the Supply Chain Sustainability Schools assessments. By completing the assessments they have managed to identify areas for improvement and areas requiring further investment.

Training and communication – Utilising the school's e-learning modules has helped focus the team awareness on Abirds impact on the enviroment. It's also helped with the understanding of what changes needed to be made to be able to provide more sustainable offerings.

Sustained development – Abird Power Solutions have accessed 58 resources through 48 hours of online engagement, of which 14 hours are CPD accredited. Over the next 12 month all Abird employees will have access to the e-learning modules and resources, enabling the company to development all the roles throughout the business.

Value gained:

Abird Power Solutions has gained value from being a Supply Chain Sustainability School member through:

- **Increased sustainability compliance**
- **Access to resources and training**
- **Increased focus and communication**
- **Reducing environmental impact**
