

Challenges:

The largest business and global challenge is undoubtedly sustainability. As a major contractor within their industry sector Wilson and Scott recognise their responsibility to deliver long term value and sustainability to provide a lasting positive legacy for the planet and future generations.

The company supports national and local communities through a customer centric action plan and social value calculator and is engaged in significant social value delivery.

This includes challenges relating to employment, economic and social recovery from COVID-19.

Challenges around sustainable collaborative working are addressed through the company's suite of integrated certified ISO management systems comprising ISO 9001, 14001, 39001, 44001 and 45001.

Impact:

Through being an active member of the School Wilson and Scott has received the following benefits:

- **Free resources to upskill colleagues:** Wilson and Scott have engaged actively at senior management level with the School's extensive online resources and learning pathways to facilitate an enhanced strategic awareness of sustainability issues so that their existing credentials can be developed further.
- **Sustainability benchmarking:** The self-assessment tools within the School have been instrumental in achieving in-depth knowledge of the future pathways necessary to become a sustainable leader of the built environment within their sector. The company will continue to benchmark itself through the reassessment tools within the School to ensure that it remains current with sustainability issues and knowledge, and to use these tools to drive enhanced sustainability deliverables within the company.
- **Continued knowledge development:** Although the company already scores significantly higher than average across all the School's sustainability subject areas, it will seek to further enhance these scores as an element of their pathway towards greater sustainability.

Value gained:

Wilson and Scott will continue to promote their achievements within the School as a tool to facilitate enhanced collaborative working with customers in respect of sustainability, and thus develop their competitive advantage within their market sector. Resources from the school will also be used within Wilson and Scott's workforce and supply chain to promote knowledge and upskilling relating to sustainability issues.
