

Challenges:

One of the biggest sustainability issues facing Mastermac Surfacing Limited is an environmental issue, and that being the use of diesel on sites for tarmac laying operations. Tarmac operations requires

amounts of diesel, and risks pollution and environmental damage. Mastermac had to address this issue through specific training of operatives and procurement of sustainable products that would minimise pollution such as enviropads, plant nappies etc.

Mastermac Surfacing Limited has a Sustainability Policy, published 1st February 2021. As a general target, it's their aim to achieve sustainable consumption and production at a wider level.

Impact:

Through interaction with the School, attending multiple training workshops and completing several assessments, Mastermac has been able to gain valuable impact:

- **Benchmarking knowledge:** The assessment process was straight forward, easy to complete, and the web interface was very user friendly. This benefited Mastermac Surfacing Limited by understanding team knowledge gaps, enabling them to point out training needs.
- **Implementing best practice:** Through completing the action plan of resources and then the re-assessment, Mastermac gained knowledge and identified further gaps that should be filled, so they can develop more knowledge on topics that can benefit the Matermac Team.

Value gained:

New knowledge: Engagement with the Supply Chain Sustainability School brought along a variety of new knowledge to various members of Mastermac Team.

Gaining new contracts: Membership to the Supply Chain Sustainability School is also used within gaining new contracts, as members to recognised bodies demonstrate due diligence towards various aspects of work (either safety, sustainability, etc).

Services

Specialists tarmac contractors in Tar Macadam (Tarmac) or Asphalt repairs.

About

Specialists tarmac contractors in Tar Macadam (Tarmac) or Asphalt repairs, resurfacing roads, tarmac driveway repair, car parks, forecourts/etc for domestic, commercial, and civil contract work which includes local authorities.

Increased company reputation: Supply Chain Sustainability School membership increase company's reputation, and through the added value in terms of individual knowledge, risks can be addressed and managed. Also, processes can be effectively reviewed, and any deficiency can be acted upon.

Future Proofing:

We would like to continuously attend and be part of School's training courses and be able to continuously search for items of interest within the School's online topic browsers. We continuously want to use the online tools towards improving one's knowledge on certain topics.
