

Certas Energy and the Environment

At Certas Energy, we are committed to running our business in a sustainable way. We take very seriously our responsibility towards the environment, and so we have listed below a number of actions and positions that we are taking to improve our environmental footprint.

1. We support the Paris climate agreement and its aims.
2. We promote and sell cleaner fuels, we are the exclusive distributors of Shell GTL in the UK.
3. We seek to develop new, cleaner lower greenhouse gas emitting fuels and play a full part in European and UK initiatives to move towards cleaner fuels.
4. As an energy distributor, rather than producer, we will seek to meet our customers' fuel requirements by offering cleaner alternatives, be that through the 'electron' for electricity based solutions or through the molecule for cleaner liquid fuels.
5. We believe in the case for decarbonised liquid fuels as a viable alternative source of energy, re-purposing the existing fuel infrastructure, and are committed to continuing to develop and promote the case for clean liquid fuels.
6. We have developed and actively promote a carbon offsetting scheme, so that customers can buy existing carbon based fuels in the confidence that the impact will be mitigated.
7. We promote fuel economy and waste reduction schemes for our customers and for our own fleet.
8. We already recycle 97% of the waste produced in our depots and offices, and we encourage our colleagues to use technology to reduce their need to travel to meetings, to discourage printing to paper and to take responsibility for their own environmental footprint.
9. We operate our business to the highest standards. Our parent company, DCC, is listed as one of the world's most ethical companies, and Certas Energy operates to ISO 50001, ISO 14001, OSHAS 18001, ISRS Level 4 as well as being upper quartile on the BITC corporate social responsibility index.
10. We sell and promote AdBlue which reduces tailpipe emissions in euro 6 engine vehicles.
11. We participate in trade association, in industry and in Governmental work, both in the UK and in Europe to help develop future initiatives which will positively impact on our environmental footprint.
