SECTION TWO

About the School

Our mission

“To be the world class collaboration to enable
a more sustainable built environment”

The School is a common approach to...

1. Assessing supply chain sustainability competence
2. Developing suppliers' sustainability knowledge

17,000+ companies

SUPPLY CHAIN SUSTAINABILITY

SECTION THREE

Demonstrating the Resources and the Assessment Tools

Demonstrating the Tools:

1. Training Needs Analysis
2. Digital Maturity Assessment

World Class, Collaborative Learning

The School is a collaboration between clients, contractors and first tier suppliers who want to build the skills of their supply chains.

SUPPLY CHAIN SUSTAINABILITY

SECTION FOUR

Characteristics of a Digital Leader

Percentage of respondents who agree or strongly agree

- My organization **needs to find new leaders** for the organization to succeed in the digital age.
- My organization is effectively **developing the types of leaders** who have the capabilities necessary to lead the organization in a digital environment.

Go to www.menti.com and use the code 6064 5981

Rate your own digital maturity

judgement

TOOL	Background	Application	Benefits
APHEX 	<p>APHEX Planner is a short-term, detailed web-based planning tool. The parent start-up has been created by ex-Tideway ex-Costain engineers and QSs and the proximity to site teams have been continuous. APHEX took on board most suggestions from Tideway sites to incorporate into the product. It has mostly replaced Microsoft Project (but MS Project still used for simulation by some) and some functions are shared with 4D BIM modelling although they are recognized to have different purposes</p>	<p>Clash detection and smart suggestions for an alternative sequence (between activities on the main Gantt chart but equally on a 2D site plan is the activities have been coded to their respective areas). Optimization of schedule (supports the identification of critical path, re-alignment of activities to save time). APHEX Planner operates in a live environment (no offline versions so always one schedule). Delay analytics (the user is prompted to input the reason for every delay (when an activity is pushed back & APHEX aggregates delay reason statistics for insights))</p>	<p>1. Space-proofing contributes to preventing clashes (and thus delays and materials waste) during delivery. 2. When APHEX is used in weekly lookaheads, it can (with a proper set-up) engage equally the engineers, the foremen and the subcontractors to reveal their tacit knowledge and input their previously separately held schedules. 3. Confidence of looking at the most up to date version because of the live (no offline versions) environment.</p>
Augmented Reality	<p>Initiated by the BIM team for training before going into complex areas, but it is associated with high costs of design and has therefore a fairly limited application scope</p>		<p>Visualization as training before entering complex, confined areas, increasing the safety and decreasing the risk of accidents</p>
Drone surveys	<p>A drone to survey the interior (dimensions, geolocation, state) of sewers (third party assets)</p>	Demonstration	<p>1. Increase in safety, reduction in time and cost as opposed to traditional surveys</p>
Google street view	<p>A bottom-up initiative. Composed of a 360 degrees camera (c. £150 fixed cost) and cloud storage (c. £10 per month). The camera is at present manually operated to take daily snapshot at different site locations.</p>	<p>Progress tracking, safety monitoring, site security, and as-built documentation. Digital images provide an unprecedented opportunity to visually capture actual status of construction sites (at a fraction of cost compared to other alternatives such as laser scanning). Demonstration (for internal learning, external relations, and auditability by the</p>	<p>1.Reduced number of site visits from people non-essential for delivery (saved cost & time of engineers doing the site tour, including the H&S briefing, the Start of Shift), Support for learning (leaves trace when a mistake was made), 2.Support for auditability and as-built documents (reduced risk of missing evidence, reduced time for the red-lining process and cumentation)</p>
Laser scanning & TrueView	<p>Initiative to identify discrepancies supplied by third-party as their assets</p>		<p>ing discrepancies - A discrepancy of 120mm in the 3D model supplied by third party and reality - if fixed up, the design would have been wrong (thus avoided the cost of re-work)</p>
Photogrammetry		<p>An immediate photo survey of an area which facilitates the input into a 4D model</p>	
FlowFarms	<p>Allows to create digital processes (workflows and forms) without the need for programming. Reduced paper usage, no lost forms, better structured data for analytics, awareness of process holdups</p>	<p>Create and fill forms without needed programming experience</p>	<p>1. Reduced time to process because smaller loss of forms. 2.Augments the benefits of Finance robotics (weakest there was absence or illegibility of delivery notes). 3.Benefits multiplied the more repetitive a process (e.g. daily checklists for tunnelling).</p>
TOTEM	<p>A large screen within a metal enclosure placed in safe zones outside on site, the large touch screen connected to Wi-Fi allows the access core systems (Microsoft Teams, APHEX Planner or a 4D BIM model) without leaving the site. iPads aren't allowed on site (to read 4D models) because of health & safety (could get distracted and not notice a danger ahead or above) + signal problems to receive data and use the most up to date drawing (if the worker needs to walk 10-15 minutes each way to get signal, it goes against many benefits of time saving, and most likely will cause the worker not to</p>	<p>Furthering 4D BIM benefits to the site. Involves the production-side in understanding the sequence and upskills in new ways of works. Empowers the generation and use of more visual, digital RAMS, SoSs and reports.</p>	<p>1. Increases access to 4D BIM 2. Saves engineer's time (and loss of focus) lost walking between the site and the office 3. Increases demonstration capability for delivery, de-risks constructability (start of shifts increasingly delivered by the TOTEM)</p>

Create a Matrix of Tools

Breakout Session

- 1 What digital tools do you currently use and what advantages do they bring?
- 2 What digital tools are you considering and why?

Building talent

"Young people nowadays have digital capabilities way beyond my knowledge. I have to accept and use that expertise."

Create:

- meaningful work and growth opportunities for staff
- a high-performance workplace and
- a climate of continuous learning and increased productivity.

Influencing

What percentage of change initiatives fail?

A: 70%

Influencing

- Difficult to quantify ROI
- May need to persuade others of the benefits of digital transformation
- Address mindsets/behaviours
- Address shortfalls in existing infrastructure.

Influencing

"[a stakeholder] didn't approve of our works because they said they didn't quite understand what needed to be done.... We created a 4D model to show them ... and ... having seen this they were very happy and [withdrew their objection]".

Benefits and Risks

What might be some of the benefits of digitalisation in your business?

3D printing

5G

Artificial intelligence & Machine learning

Big Data

Blockchain

BIM

Cloud computing

Internet of Things

Proximity sensors

Robotics & Drones

'Construction 2025 - Industrial Strategy: government and industry in partnership'

“A UK industry that leads the world in research and innovation, transformed by digital design, advanced materials and new technologies, fully embracing the transition to a digital economy and the rise of smart construction”.

*“The world
cannot be
changed
without
changing
our
thinking”*

“The greatest barrier to data success today is business culture, not lagging technology”

Q: What percentage of business executives do you think agreed with this statement?

- A: 50%
- B: 60%
- C: 75%
- D: 90%

Answer:
90%

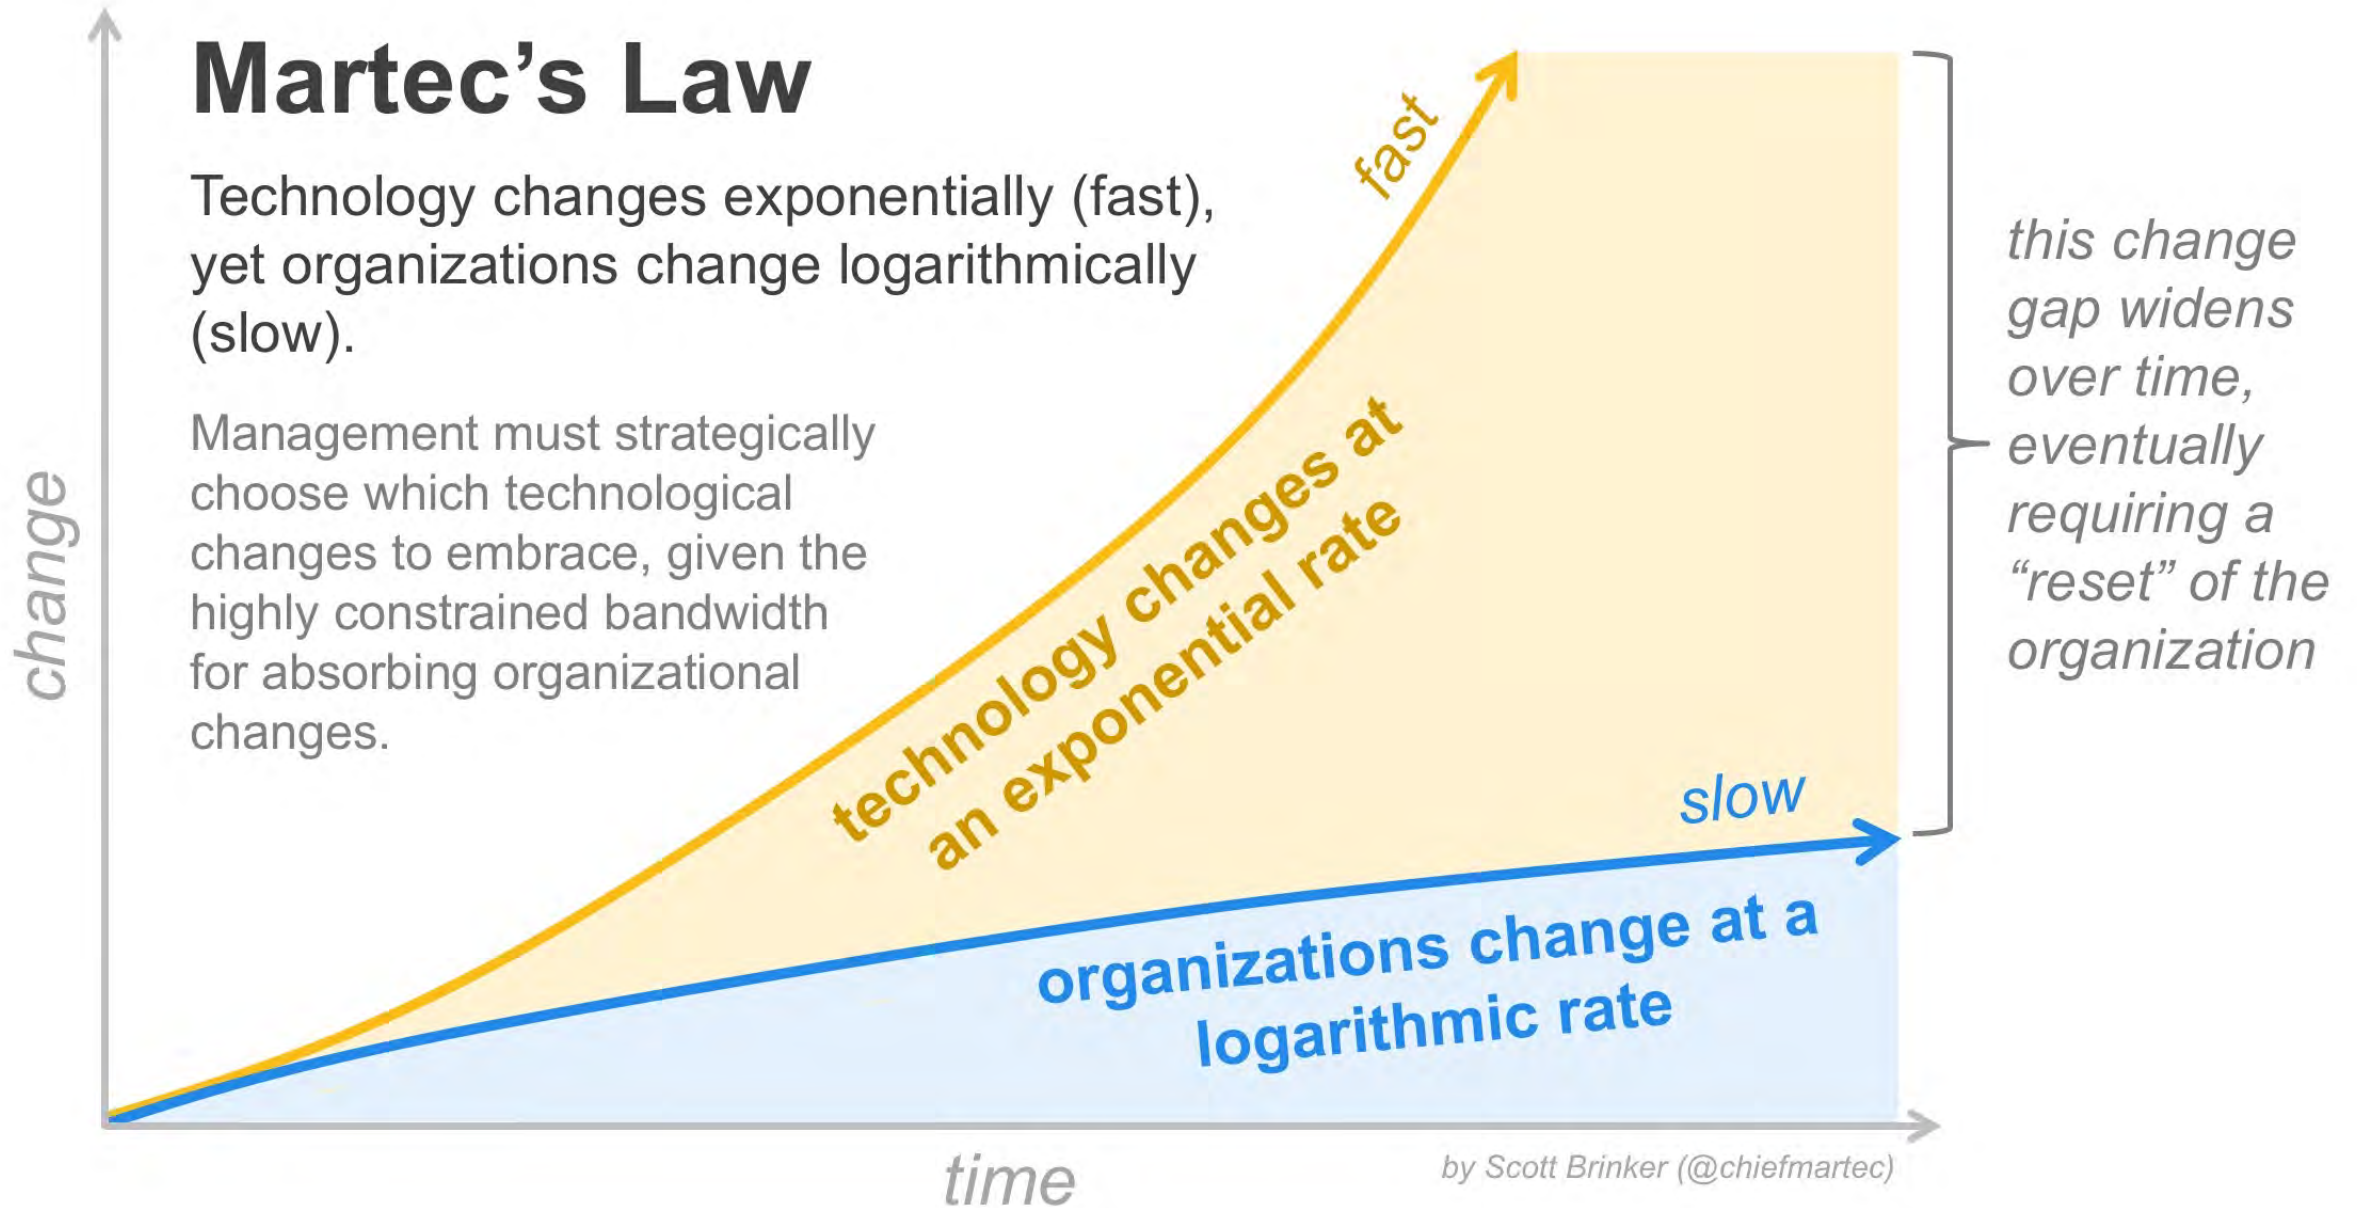

Underestimating the challenge

[Listen to John Batterbee,
Solutions Director, Costain
plc](#)

Martec's Law

Technology changes exponentially (fast), yet organizations change logarithmically (slow).

Management must strategically choose which technological changes to embrace, given the highly constrained bandwidth for absorbing organizational changes.

Failing to grasp
the opportunity

- The Acceleration Of Digitisation**: McKinsey & Company
- Tedx: Smart Cities**: How technology will change our buildings
- The Digital Skills Gap and the Future of 2020**: The Fundamental Growth

... "Digital technology and the wider understanding of its benefits are the vital next steps for modernisation.

Digital technology will be a cornerstone of the construction sector's reform to productivity, efficiency, and quality of delivery.

[It] can also support the attraction, retention and inspiration of new generations of talent for our sector".

THIS IS THE INTRODUCTORY MODULE

**A 3-hour CPD
accredited course**

Weeks 1-2

Weeks 3-4

Weeks 5-6

Introduction to Digital Leadership
Introductory Module
3 hr CPD accredited course

Assessment of Individual Digital Skills

Assessment of Organisational Digital Maturity

Pre-reading of Harvard Teaching Cases
 $\frac{1}{2}$ day

Additional Resource Learning

Minimum of $\frac{1}{2}$ day, we have over 100 resources available

Complete 4 eLearning Modules

Each course minimum of 1 hour CPD – accredited modules and certification once passed

Digital Leadership Virtual 'Harvard' Training Course
 $\frac{1}{2}$ day CPD – accredited course

Re-assessment of Individual Digital Skills & Organisational Maturity

Awarded Supply Chain School
"Digital Leadership" Badge

For leaders to become digital leaders,
they will need to develop new skill
sets.

This is what you will learn

- How to use the School's resources
- How to take a Training Needs Assessment
- What are the characteristics of a Digital Leader?
- The Benefits and Risks of Digital Transformation
- Developing a Digital Strategy
- The value of data.
