

Challenges:

Komfort Partitioning Ltd has found that the biggest challenge within sustainability is the cost of implementing some of its most significant objectives. The company has committed to achieving net zero by 2032. While small but impactful changes have already been introduced—as outlined in its quarterly “Road to Net Zero” reports available on the website—larger projects are under consideration. These include installing solar panels on the manufacturing plant’s roof, upgrading the fleet to more sustainable models, and ensuring all materials entering the warehouse are sustainably sourced. Komfort Partitioning Ltd also records data for its carbon footprint, which supports the implementation of Environmental Product Declarations (EPDs) for its products.

Impact:

The Supply Chain Sustainability School has opened Komfort Partitioning Ltd’s eyes to more ideas that support its net zero ambitions. The assessments have helped the company identify its current position and areas for improvement. Access to the School’s extensive resources and webinars has proven invaluable. Additionally, membership has enhanced Komfort Partitioning Ltd’s visibility when tendering for major contracts, giving it a competitive advantage in an increasingly sustainability-focused marketplace.

Engagement events

Komfort Partitioning Ltd has gained valuable knowledge from engagement events, particularly as sustainability becomes a critical factor in construction and manufacturing. Webinars and training resources provided by the School have kept the business ahead of the curve in understanding the latest regulations, sustainable material sourcing, and carbon reporting requirements.

Resources

Assessments: The assessments have enabled Komfort Partitioning Ltd to identify strengths and pinpoint areas needing improvement across the business.

Action Plan: Accessed through the company dashboard after the assessment, the action plan offers clear guidance on how each department can improve sustainability performance.

E-learning Modules: The e-learning modules are highly informative and have answered many internal and client queries. The certificates awarded upon completion are a valuable part of the membership, encouraging active staff engagement.

About

Established in 1973, Komfort Partitioning Ltd is a design-led UK manufacturer of internal solid and glazed partitioning systems with integrated door sets, including frameless glass doors. The company offers glass and solid office partitions, movable walls, and fire-rated glass solutions. Komfort Partitioning Ltd is known for its commitment to service, flexibility, and technical support, with experienced specialists delivering architectural visions through a trusted contractor network.

Value gained:

Komfort Partitioning Ltd values its membership with the Supply Chain Sustainability School for the significant advantage it offers during tenders. The School provides up-to-date information on legislation, webinars, training, and other vital resources. With sustainability at the top of its agenda, Komfort Partitioning Ltd relies on the School to supply information and pathways for continuous improvement. The company aims to be recognised as a sustainability leader in its field, enhancing its reputation and solidifying its position as a preferred supplier through its sustainability achievements.

Future proofing:

Komfort Partitioning Ltd aims to achieve Gold Membership status within the Supply Chain Sustainability School. It will continue conducting regular assessments and implementing the resulting action plans. Staff will have ongoing access to e-learning courses and materials to ensure the right resources are in place to reach this goal.
