

## Challenges:

LAC Air Conditioning Ltd's principal sustainability challenge is reducing fuel consumption on the journey toward Net Zero. The business has introduced strategic planning for all work-related travel, continually monitoring mileage and fuel usage to identify savings. Early results show measurable reductions, and the fleet is being progressively replaced with low-emission vehicles to help achieve Net Zero by 2050.

## Impact:

The Supply Chain Sustainability School has broadened LAC Air Conditioning Ltd's understanding of wider sustainability issues. Learning pathways, e-learning modules and virtual workshops have equipped employees with best-practice knowledge, enabling closer collaboration with clients who share Net Zero ambitions. Regular assessments offer clear metrics, allowing the company to track scores and target improvements across environmental, social and economic performance.

## Value gained:

School membership motivates staff and keeps policies, procedures, and training current. Access to trusted resources strengthens LAC Air Conditioning Ltd's reputation, demonstrating determination and commitment to sustainability objectives. This credibility enhances relationships with existing clients and improves the company's ability to secure new work in a competitive sector.

## Future proofing:

LAC Air Conditioning Ltd will maintain active engagement with the Supply Chain Sustainability School, using bespoke learning pathways, e-learning and virtual workshops to meet its own and its clients' evolving requirements, while continuing to drive down fleet emissions on the path to Net Zero.
