

Challenges:

One of the challenges MAVE has faced is using sustainable energy with their high-tech towers. MAVE adopted the use of solar panels onto their towers to reduce the carbon emissions and any other greenhouse gases that could be possibly emitted to zero. This was a key change for MAVE as it helped to greatly reduce their carbon footprint, and their uses of renewable energy, making MAVE overall more sustainable. One of the current challenges MAVE faces is travel. This is because the cars that MAVE uses emit gases that contribute to climate change and global warming. This is an issue for MAVE as it still shows they are producing carbon in some way. One way for MAVE to tackle this issue is to travel in a more sustainable manner, for example, using electric cars to reduce emissions from fuels.

Impact:

Assessments: The process of using assessments is a very important and useful part of the resources that the school offers. This resource specifically allows MAVE to test their knowledge beforehand on a specific area of sustainability, such as people or digital. This tool is also available after using the action plans, allowing MAVE to test their knowledge to see where they have made any improvements after using the action plan. This is shown when they do the test again and it shows their latest baseline score, compared to the one they previously got.

Action Plan: The action plan is a very beneficial and important part of the resources that the school offers. This section allows MAVE to learn more about the area they have created an action plan for, using videos and explanations to better their understanding of i.e. digital sustainability. This has benefitted MAVE in that it has given everyone a wider and broader understanding of how different areas of sustainability play a huge role in how MAVE functions. For instance, the overall sustainability of MAVE as well as how they can make their operations within offsite productions more sustainable.

E-learning modules: The e-learning modules were incredibly helpful to MAVE, where they learn better when watching how something is done in a simple manner. They provided much value to MAVE as each of them that have been through the modules and watched them all are in agreement of how they are so simplistic and easy to understand; bettering each person's mind into thinking "how can we be more sustainable?". Without these, they think that it would come across as more tedious, this really helps to engage the user and tailor it to them.

Services

Construction site security and technology solutions in the UK

About

At MAVE, their team is made up of the brightest minds in construction site security, with decades of expertise. Combined with the sharpest technology, tailored to your unique needs, they deliver a deeper level of protection. They understand your challenges, anticipate your needs, and provide unwavering support when it matters most. Because true protection isn't just about what you prevent, it's what you enable.

Value gained:

The benefits that MAVE has achieved are obvious; being that everyone has a wider understanding of the topic of sustainability. This becomes very beneficial to all of them and MAVE entirely as everyone is then thinking about how sustainable an action is or if there is an alternative that is a better approach to reduce emissions and, for example, the carbon footprint. Another benefit MAVE has gained from this school, as well as knowledge and understanding, are the rewards they get. MAVE is referring to certificates and badges, where they can download them to show that they have done well within the school giving them a sense of accomplishment and motivation to strive for the highest level. In terms of the future of their relationship with the school, MAVE sees this as imperative to stay here to carry on learning what they can to ensure their business operates as efficiently as possible whilst remaining as sustainable as they can over the different things they do across the UK. This has also allowed them to look at how they can save money in different areas, therefore saving their customers money too giving them that more competitive edge to win more business but still having the ability to provide the best top-quality services

Future proofing:

MAVE's future with the school is to remain on board. This is because they feel as a business and as a group of people it is incredibly important to remain as sustainable as they can to essentially look after the planet and those around them. But equally, they also feel that sustainability should be a part of the training that they provide to ensure everyone within the business regardless of title or level each have a good and detailed understanding as to why sustainability is so important and helps them in their daily business affairs.
