

## Challenges:

William Hare Limited is a global leader in engineered steel solutions, delivering innovative and sustainable projects for clients worldwide. The company has established a reputation for safety, quality and collaboration through the ambitious pursuit and successful delivery of challenging projects across diverse sectors.

## Impact:

Engagement with the Supply Chain Sustainability School has enabled William Hare to access high-level training resources tailored to both individual and group requirements. Learning modules on carbon accounting, responsible sourcing and environmental management have underpinned the company's internal training programmes, accelerating upskilling across departments. The School's structured learning pathways and targets have helped William Hare demonstrate continuous improvement in sustainability principles, while its CDP-accredited content has improved the rigour of carbon reporting. Access to practical tools has supported the embedding of sustainability into project planning, procurement and stakeholder engagement, enabling William Hare to meet client expectations and strengthen its competitive position.

## Value gained:

- Enhanced workforce competence through targeted learning pathways,
- Improved carbon-data capture and reporting processes aligned with industry best practice,
- Strengthened responsible-sourcing practices to achieve BES 6001 "Very Good" status,
- Greater confidence in demonstrating sustainability credentials to clients, many of whom require School membership,
- More robust internal metrics and benchmarks for tracking environmental performance.

## Future proofing:

William Hare plans to achieve and maintain Gold standard membership of the Supply Chain Sustainability School. The company will continue to promote the School's resources throughout its business and supply chain, driving deeper understanding of key sustainability topics. Future support in the form of advanced sector-specific content and collaborative forums would further empower William Hare to innovate and share best practice across the industry.
